Congratulations on owning the Dualit Corkscrew and Stopper Set. Before using your Corkscrew for the first time please read these instructions carefully so that you obtain the best possible results.

## 1 Foil Cutter

- Place the bottle on a flat surface.
- Position the foil cutter side of the stand over the top of the bottle.
- Squeeze in the two side buttons applying enough pressure to cut the foil, then rotate bottle until foil is fully cut.
- To lift off the cut foil from the top of the bottle, gently grip side buttons while making an upward lifting action.
- The removed foil should be held inside the cutter.

## 2 The Corkscrew

- Place the bottle on a flat surface.
- Place the corkscrew over the top of the bottle, so that the corkscrew shoulders on the inside of the corkscrew rest on the top of the bottle.
- Firmly grip the bottom of the legs of the corkscrew with one hand. NOTE: Continue to hold for the duration of procedure.
- Apply a downward and clockwise rotational action to the handle and continue turning until the cork has risen fully up the spiral and out of the neck of the bottle.
- Remove corkscrew with cork from the bottle.

## 3 To eject the cork

- Gently hold the body of the corkscrew
- Rotate handle in an anti-clockwise direction, until the spiral is out of the cork.
- Open the legs of the corkscrew and at the same time push the spiral gently down onto the cork pushing it out from the corkscrew.

## 4 The Crown Top Opener

- Position the correct side of the stand over the bottle.
- With the heel of your hand push down and at the same time with your fingers pull up, the bottle top will be removed.

## 5 The Stand

- To store the corkscrew, locate into centre of the stand with gently downward pressure.  
(see image on reverse)

## 6 The Stopper

- The Dualit universal stopper will fit most bottle tops, whether wine, champagne or even sparkling drinks.
- After opening a bottle, simply insert the stopper into the bottle and the weight of the stopper will provide an airtight seal.
